Sorry to spam you but I added Alanna's edit (I missed this one in my email flurries) and I also inserted a bullet on fish consumption—saying that no research project has been done on fish consumption in the river, but based on the surveys that have been completed, we know that people do eat fish from the river.

I'm reading the topline messages piece and I like where it's headed.

Subject: RE: my latest draft of information for the briefing package

Hi Cami,

Deb and I have reviewed the briefing doc. Aside from rewording bullet below, we have nothing else at this time to add.

- Since the RAL is not the cleanup level, and since the RAL is greater than the cleanup level, EPA will be relying on natural processes to get the river sediment down to the cleanup level, and that will take time. Time to achieve cleanup goals is another factor EPA will consider when evaluating each cleanup alternative. (Clarify message behind this bullet)

However, we suggest also considering including a message that EPA will make a decision based on data, science and appropriate technologies. (Congressional/LWG saying decision will be too big – and community saying it's not enough)

Thanks

Subject: my latest draft of information for the briefing package

Is attached. My goal for this document is to tell the story of Portland Harbor as well as get some messages on known lightening rod issues. I hope to use it to develop briefing materials for Dennis and Dick as well as develop talking points for the various meetings we have over the next couple months (messages for Congressional visits, for upcoming Exec meetings, our external outreach). Please let me know what I've missed, what needs to be better messaged, what is too much, etc.

Happy long weekend!
